1. Executive Summary

The purpose of this report is to carry forward key recommendations from the Archives of Ontario Private Acquisitions Strategy by conducting examinations of Ontario’s major sectors. This report highlights sub-sectors or areas within the private health sector which are likely to generate records of provincial significance.

With healthcare being the province’s largest budget item, the importance of the health sector to Ontario cannot be understated. The identification and appraisal of activities within the health sector will drive and support private records acquisition policy for health sector records in the Archives of Ontario Private Acquisitions Strategy.

While specific organizations and bodies have been cited for illustrative purposes within this report as examples of the kinds of organizations, associations, and other bodies which could be acquired, it is not the intention of this report to provide such a low-level review.

2. Overview of the Health Sector in Ontario

In 2011, the Province of Ontario spent over $48 billion on healthcare. In the same year the private sector spent just over $25 billion.¹

The Province has made many changes in recent years with respect to the management and operation of Ontario’s public healthcare systems. None have been as dramatic and controversial as those which emerged from the recommendations of the Heath Services Restructuring Commission (HSRC) which conducted its work between 1996 and 2000.

The HRSC recommended; the creation of larger hospital organizations, the closure of 31 public, 6 private, and 6 provincial psychiatric hospitals, the expansion of in-home care and facility-based long-term care, the integration of regional community-based health systems, the organization of small rural and northern Ontario hospitals into networks, and the development of strategies to achieve (1) a capacity for effective health information management; (2) reform of primary health care; (3) integration of health services in communities committed to achieving it; (4) the capacity to measure and assess improvements in the performance of health care delivery and to enhance its productivity and accountability; (5) the establishment of academic health science networks; and (6) more effective governance, by the province, of the restructured health care system.²

In 1999, following the recommendations made by the HRSC, the Province proceeded with the divestment of the six provincially-operated psychiatric hospitals.

In 2003, the Ontario healthcare system experienced one of its most significant health crises – SARS. The outbreak affected 330 people in Ontario with serious lung disease and claimed the lives of 44. The outbreak revealed many weaknesses in Ontario’s healthcare system, which were addressed in the report of The SARS Commission (Ontario) in 2006.

In 2005, the Ministry of Health and Long-Term Care (MOHLTC) established the Ontario Air Ambulance Services Co. (OAASC) following the 2001 Ontario Auditor General’s report that all air ambulance services should be coordinated under one body. In 2006, the OAASC was renamed ORNGE, and was later given responsibility for the authorization of all patient transfers between hospitals, mainly as a response to the SARS crisis. ORNGE became the subject of public scrutiny over its business practices and senior executive salaries, events which led to greater scrutiny and oversight of the operator’s activities.

In 2007, the Province of Ontario established 14 Local Health Integration Networks (LIHNs) to coordinate the planning, integration, funding and delivery of public healthcare by geographic region.

Community-based provision of healthcare in Ontario means more than providing healthcare by geographic region. Community-based care is also being defined by the particular needs of ethnocultural groups, or communities whose needs are not being addressed by mainstream institutions.

Advocacy groups play an important role in raising awareness of gaps and emerging issues across many aspects of healthcare.

As Ontario’s population grows and the average age Ontarians increases with the growth of the senior citizen demographic, the healthcare needs within the province will continue to dramatically change.

Under the Naturopath Act (2007), the province is in the process of changing the way Naturopathic Doctors are regulated in Ontario, by bringing them under the Regulated Health Practitioners Act.

There is an ongoing dialogue between provincial-focussed organizations, advocacy groups and the makers of public policy concerning healthcare to ensure that Ontario’s constantly shifting healthcare needs are being addressed.

3. Analysis of Archives of Ontario Holdings

In examining the holdings of the Archives of Ontario, a search of the Archives Descriptive Database was undertaken to determine what records have been acquired from the private sector that complement the functions of the government with respect to the administration and regulation of human health. This revealed that the Archives' holdings contain only a small number of private records documenting some of the functions carried out by the Ministry of Health and Long-term Care.

The Archives of Ontario Appraisal Focus Report for Ontario’s Health System: Ontario Ministry of Health and Long-term Care and Select Agencies (2008) identifies the Ministry’s six core functions as:

1. Managing health system information
2. Providing a health system strategy
3. Investing in and funding the health system

Analysis Report of the Health Sector in Ontario
4. Providing health system accountability and performance
5. Administering public health
6. Regulating the health system and providing advisory services.

The Archives’ private records holdings are only reflected in two of these six functions. Providing health system accountability & performance and administering public health are reflected in three of the Archives’ private holdings: (1) Cancer Care Ontario fonds (F 4559); (2) Wellesley Central Hospital fonds (F 4475); and (3) Multicultural Health Coalition (F 4638) fonds.

4. Methodology for Analyzing the Health Sector
This section outlines the analysis methodology and rationale for how the sector was broken down and assessed.

Sub-sector Identifications
Sub-sectors within the Health sector were selected based upon an analysis of major activities related to healthcare, health practitioners and other health issues known to occur within Ontario. Sub-sectors were identified based upon the major categories of organizations, bodies and individuals known to be involved or have an interest in such activities within the private sector.

Exclusions and Limitations
This section provides an overview of certain sectors or categories in the Ontario health sector which were excluded from the analysis.

The Local Health Integration Networks (LIHNs) were created by the Government of Ontario under the section 3 of the Local Health System Integration Act, 2006. The LHINs were considered for inclusion as a distinct sub-sector under the Health Sector analysis; however, the LHINs have been included in the draft regulation amendment for Ontario Regulation 336/07, under the Archives and Recordkeeping Act, 2006.

5. Analysis of Health Sub-Sectors
This section examines the scope of Health Sector records with respect to:

1. Identifying and defining sub-sectors and categories within the Health Sector,
2. Making connections between private sector activities and government functions,
3. Identifying existing holdings in the Archives of Ontario related to the Health Sector (containing records dated 1980-CCY),
4. Identifying possible acquisition targets in the private sector,
5. Providing a rationale for the importance of acquiring documentation within a sub-sector or category, and
6. Identifying level of acquisition priority for each sub-sector based upon the rationale.

Analysis Report of the Health Sector in Ontario
Health Sector Sub-sectors and categories:
For the purposes of analysis, the activities within the Health Sector have been divided into the following sub-sectors and categories.

1. Provincially-focused organizations
2. Colleges of practitioners
3. Professional associations
4. Advocacy organizations
5. Healthcare and research institutions
6. Individuals and practitioners

Government Functional Linkages
The functional linkages provided in the following table are based upon the Archives of Ontario Appraisal Focus Report for Ontario’s Health System: Ontario Ministry of Health and Long-term Care and Select Agencies (2008), which identified the Ministry’s six core functions as:

5. Managing health system information
6. Providing a health system strategy
7. Investing in and funding the health system
8. Providing health system accountability and performance
9. Administering public health
10. Regulating the health system and providing advisory services
